Slideshow video

The Honey Bee

The honey bee is an insect. Honey bees live in a hive or nest. Some hives are built by the bees themselves, others are built by humans. A person who looks after a beehive is known as a beekeeper. Plants produce a powder called pollen. They also produce a sweet liquid called nectar. Honey bees collect the nectar and pollen from flowers and use it to produce honey. Bees transfer pollen from flower to flower, which helps new flowers to grow.
